Profile

Software Engineering undergraduate (Sunway University / Lancaster University dual-degree) with 3+ years of hands-on freelance experience building and shipping cross-platform mobile apps and full-stack web applications for real clients. Comfortable across the stack — Flutter front-ends, Node.js back-ends, REST APIs, and SQL/NoSQL databases — and an active user of AI-assisted development tools (Claude, ChatGPT, Cursor) to design, debug, and ship faster. Strong eye for minimalist UI/UX, with a track record of taking projects from concept to deployed product. Targeting a software engineering or technical project management internship.

Education

09/2024 – present
Subang Jaya, Malaysia

Software Engineering (Hons), Bachelor's Sunway University

- Dual-degree programme with Lancaster University (UK); coursework in software architecture, data structures, mobile development, and UI/UX design.
- Applying academic concepts directly to live freelance projects, from system design through deployment.

05/2023 – 07/2024
Cyberjaya, Malaysia

Information Technology, Foundation Multimedia University

- Built foundations in programming, data structures, networking, and web fundamentals.
- Developed core problem-solving skills that directly support current SE study.

Skills

Programming Languages Dart, JavaScript, TypeScript, Python, HTML/CSS, GDScript
Frontend Flutter, React Native, Tailwind CSS
Backend & Databases Node.js, REST APIs, Supabase (PostgreSQL), Firebase (Firestore), SQL/NoSQL
AI-Assisted Development Claude / Claude Code, ChatGPT, Gemini, Cursor, GitHub Copilot, Google AI Studio
Tools & Workflow Git/GitHub, Xcode, Figma, Godot Engine
Languages English (fluent), Arabic (native)

Work Experience

02/2023 – present
Remote

Freelance Software Engineer Self-Employed

- Build and ship cross-platform mobile apps in Flutter/Dart, owning both the user-facing UI and the back-end logic, APIs, and data layer behind them.
- Develop back-end services and REST APIs with Node.js, integrating cloud databases (Supabase/PostgreSQL, Firebase/Firestore) for authentication, data persistence, and real-time sync.
- Deploy applications end-to-end across iOS, Android, and the web, managing the full lifecycle from concept to release.
- Overhaul web app UI/UX with minimalist, modern interfaces, and use AI-assisted tools (Claude, Cursor) to accelerate development and debugging.

01/2026 – present
Subang Jaya, Malaysia

Digital Marketing Executive Sunway Cybersecurity Club

- Manage the club's LinkedIn presence, planning content and campaigns to grow engagement and reach.
- Produce promotional graphics and event materials in Canva to support recruitment and awareness.

Projects

02/2026 – present
Remote

Hangout Spending Tracker (Flutter, Dart, Firebase/Supabase)

- Built a cross-platform mobile app that calculates and splits group expenses in real time.
- Implemented the cloud back end and database layer to sync shared expense data and user accounts across devices.
- Architected app state management for performance and deployed to both Android and iOS.

09/2025 – present
Remote

Tajweed Interactive Web App (UI/UX, Frontend)

- Redesigned the navigation hierarchy and interface for an educational platform teaching Quranic recitation.
- Prioritised usability and accessibility for learners, restructuring information architecture to reduce confusion.

09/2024 – 07/2025
Remote

Task Management App (Frontend Web)

- Built a custom to-do web app with a ClickUp-style interface, drag-and-drop, and dynamic category tagging.
- Implemented priority-sorting logic and a responsive, state-driven UI.

02/2024 – 08/2025
Remote

Modern Portfolio (HTML, CSS, JavaScript)

- Built a responsive personal portfolio with minimalist aesthetics, custom animations, and liquid-glass CSS effects.
- Designed clean navigation with smooth transitions across all screen sizes; deployed via GitHub Pages.

04/2024 – 06/2024
Cyberjaya, Malaysia

Designer & Coder

Fallen Asteri (Godot Engine, GDScript)

- Developed a 2D platformer with core gameplay: player movement, combat systems, and scene transitions.
- Managed version control and repository architecture with Git/GitHub.
